Summary

Final-year B.Tech student specializing in DevOps Engineering with a strong interest in cloud computing, automation, and containerization. Skilled in Docker, Kubernetes, CI/CD pipelines, GitHub Actions, and ArgoCD, with hands-on experience in monitoring using Prometheus and Grafana to build scalable and reliable systems.

Education

Netaji Subhas Institute of Technology, Patna

Bachelor of Technology (B.Tech)

Expected 2026

CGPA: 8.23

Experience

DevOps Intern — ICE Technology Lab, Patna

Mar 2025 – Apr 2025

- Gained hands-on experience in DevOps practices including Docker-based containerization and Kubernetes deployments for scalable application management.
- Built and automated CI/CD pipelines using GitHub Actions and implemented GitOps workflows with ArgoCD, improving deployment speed and reducing manual errors across environments.
- Provisioned and managed cloud infrastructure on GCP using Terraform, and implemented monitoring solutions using Prometheus and Grafana to ensure system reliability.

Projects

College Event Management System (DevOps Implementation)

[View Project](#)

Tools: Docker, Kubernetes, Jenkins, Terraform, GCP

- Containerized and deployed the application using Docker and Kubernetes, enabling scalable, highly available microservices architecture.
- Designed end-to-end CI/CD pipelines using GitHub Actions and implemented GitOps with ArgoCD, automating build, test, and deployment workflows for faster releases.
- Provisioned cloud infrastructure using Terraform on GCP and enhanced system reliability with integrated monitoring, reducing manual intervention and improving operational efficiency.

Starbucks App Deployment on Kubernetes

[View Project](#)

Tools: Docker, Kubernetes, Jenkins, ArgoCD, Prometheus, Grafana

- Deployed a Starbucks clone application on Kubernetes using Docker containers, ensuring scalable and reliable application delivery.
- Built CI/CD pipelines using GitHub Actions and implemented GitOps-based continuous delivery with ArgoCD, enabling automated and consistent deployments across environments.
- Integrated monitoring using Prometheus and Grafana to track system performance and application health, improving observability and operational efficiency.

End-to-End Kubernetes Deployment on Kind with GitOps (Voting App)

[View Project](#)

Tools: Docker, Kubernetes, Kind, ArgoCD, Prometheus, Grafana, Redis, PostgreSQL

- Deployed a microservices-based voting application on a local Kubernetes cluster using Kind, simulating a production-like environment.
- Implemented GitOps-based continuous delivery using ArgoCD, enabling automated synchronization between Git repositories and cluster state.
- Integrated monitoring using Prometheus and Grafana to track application performance and resource utilization, improving observability and system reliability.

Certifications

Cloud Computing Certification – ICE Technology Lab

[View Certificate](#)

Hands-on training in GCP, Terraform, Docker, Kubernetes, and DevOps tools for scalable cloud deployments.

NPTEL – Soft Skills Development (IIT Madras)

[View Certificate](#)

Learned communication, teamwork, and professional skills to enhance workplace effectiveness and collaboration.
